CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS EXPERIMENT_2

AIM

To develop a simple Cloud-Based Property Buying and Rental System for Chennai city using a Cloud Service Provider to demonstrate SaaS, with options to search and enquire about properties based on purpose (buy, rent or commercial), place, area, budget range, property value and rental agreement.

PROCEDURE

1. Create a web-based Property Buying and Rental System for Chennai city using a cloud Software as a Service (SaaS) platform.
2. Add fields like Purpose (Buy / Rent / Commercial), Property Type, City, Place, Area, Budget Range, Property Value, Rental Agreement, Monthly Rent and Security Deposit.
3. Select the purpose (Buy, Rent or Commercial) and the property type.
4. Select the place in Chennai, enter the required area and choose the budget range.
5. For rental properties, select the rental agreement option, agreement period, monthly rent and security deposit.
6. Enter the customer details and click Search Properties to display the matching properties.
7. Select a property and submit the enquiry.
8. Display the enquiry details in the Enquiries report.
9. Deploy (publish) the application using the cloud service.
10. Access the application through a web browser to demonstrate SaaS.
